

Verestro architecture and choice of products

Below simplified example of Verestro platform architecture. Before every project please decide which functionalities are you going to use.

[image-1717855587739.png](#)

Please tick bullet points which are needed in your project and deliver it to our sales team:

INTERFACE

- White-label app
- White-label web
- SDKs - android and iOS, to minimise PCI issues
- APIs

CORE

- eKYC - are you going to register consumers? do you have own KYC solution or want to use ours?
- eKYB - are you going to register business customers? do you have own KYB solution or want to use ours?
- Data Core (any user data will be delivered to Verestro) - almost always needed
- Balance
- Card - do you want to use our issuing processing capabilities or you have another issuing processor
- Transaction History

RECEIVE MONEY

- IBAN for receiving
- Receive to card
- eCommerce gateway - do you want to use our acquirer or you have another acquirer? which ways of payments?

- Other partner assets - do you want to reload cards with points, digital assets etc.
- SEND MONEY**
- Payout to Card - sending money to any VISA or Mastercard card?
- SEPA transfers
- Internal transfers between our accounts
- QR payments
- Other ways of sending money?
- PAY TO MERCHANT**
- Apple Pay
- Google Pay
- Own wallet
- eCommerce payments
- inApp payments
- Payments from own wallet
- ATM
- CARD BENEFITS**
- Point-based loyalty
- Fee management
- Donations
- Cash back
- Vouchers
- Carbon Calculator
- Invoice management
- User groups

We are constantly adding new value added functionalities. Check if we have not added something new in the meantime :) Contact us.
