

Introduction

The document describes a set of technical requirements for the Verestro Transaction History Core API for external clients.

THC (Transaction History Core) is a service of Verestro dedicated to store, manage and deliver information about performed financial and loyalty transactions.

How to connect with us?

Verestro provides Transaction History API which is implemented according to the REST model. This API offers methods that allow managing information about transactions. Verestro team actively supports Customers with integration.

To connect with the THC Verestro team need a new customer to deliver:

1. URL endpoint (for outbound method).
2. Choose authorization method:
 - Mutual TLS (preferred by Verestro).
 - Basic Auth (deliver - user name, password).
